The Charlotte Regional Indicators Project. The Charlotte Regional Indicators Project compiles objective, reliable, and relevant measures for the 14-county bi-state Charlotte region on indicators important to the region’s quality of life. By measuring the indicators over time and comparing them to state or national data, the Indicators Project provides policy-makers, civic leaders, and the public with a solid foundation for engaging in efforts to address the region’s challenges.

The indicators are organized in ten theme areas:

- Arts, Recreation, and Cultural Life;
- Economy;
- Education;
- Environment;
- Government and Citizen Participation;
- Health;
- Housing;
- Public Safety;
- Social Well-Being; and,
- Transportation.

The Charlotte Regional Indicators Project is an initiative of the UNC Charlotte Urban Institute. It is funded in part by Advantage Carolinas, the Foundation for the Carolinas, and the Z. Smith Reynolds Foundation. Indicators are recommended by consensus of Task Forces of regional experts in each of the ten theme areas, and are evaluated by UNC Charlotte Urban Institute researchers for feasibility before indicator data is gathered, added to the Indicators database and incorporated into Indicators Project reports. Indicator data is updated throughout the year as source agencies release the relevant data sets, and is made available on the Indicators Project website. A comprehensive Indicators Report is produced every two years.

More information about the Indicators Project and the most recent comprehensive Indicators Report are available at www.ui.uncc.edu.
Cabarrus County Profile 2009

The County Profile Reports. The County Profile Reports present individual county indicator data in a format intended to make it easy to examine relationships between indicators and across themes for a single county. Each County Profile Report begins with a concise summary of indicator highlights for the county, then presents a quick-reference table of the most recent indicator data, and finally provides more detailed indicator trend data in user-friendly charts. The reports are available for each of the region’s fourteen counties, and are produced every two years.

Summary Highlights. For the most recent indicator data, Cabarrus outpaces the region in these indicators:

- Infant Mortality (Total, White, and Minority)
- 911 Calls
- Crime Index
- Public School Enrollment Growth (County School District)

Cabarrus lags the region on these indicators:

- Arts Grants Expenditures
- Library Funding Per Capita
- Percent Population with Bachelors Degree or Higher
- Giving Per Capita (Both Public Charities and Private Foundations)
- Solid Waste Disposal Rate
- Per Pupil 5 Yr. Avg. Capital Expenditures (County and Kannapolis School Districts)
- Chlamydia Rate

That is, Cabarrus’ Solid Waste Disposal Rate and Chlamydia rate are higher than the regional composite rates, and its Arts Grants Expenditures, Library Funding Per Capita, Percent Population with Bachelors Degree or Higher, Giving Per Capita, and Per Pupil 5 Yr. Avg. Capital Expenditures are lower than the regional composite percentage.

Looking at trends over time, key Cabarrus County indicators demonstrating appreciable change over the most recent available five-year time periods include:

- Grants Expenditures Per Capita (+184.1%, 2007 vs. 2005)
- Percent Families Living in Poverty (+95.0%, 2007 vs. 2000)
- Giving Per Capita (Private Foundations) (-93.2%, 2006 vs. 2002)
- Minority Infant Mortality Per 1,000 Live Births (-77.7%, 2007 vs. 2003)
- Percent Individuals Living in Poverty (+76.9%, 2007 vs. 2000)
- Gonorrhea Rate Per 100,000 (+61.5%, 2007 vs. 2003)
- Total Infant Mortality Per 1,000 Live Births (-57.1%, 2007 vs. 2003)
- People in Motor Vehicle Accidents, Fatality (-54.2%, 2007 vs. 2001)
- Developed Acreage (+53.8%, 2006 vs. 1996)

</tbody>
</table>

For each indicator for which county-level data is available as of January, 2009, this table presents the most recent data for the county and the region, along with a percent change for the county. County percent change represents a five-year trend wherever possible: it is the percent change from a prior year (the “from year” column) to the most recent data; generally, the “from year” is five years prior. Indicator definitions and data sources can be found at the end of this document. Regional data is calculated as a fourteen county average whenever possible, and exceptions to this are detailed in the endnotes. Unless otherwise noted, “Per 1,000” or “per 100,000” refers to population.
**Demographics**

Cabarrus County is one of the more populous counties in the region. Its population has increased over each of the past four decades, most rapidly from 1990 to 2000 (32%), and is expected to increase at similar rates over the next three decades. Between 2000 and 2007, the county became more ethnically and racially diverse, with the percentage white population decreasing slightly and the percentage of most minorities increasing. Between 2000 and 2007, the county’s age distribution shifted slightly towards the 45 and older age groups, although the 35-44 age group remained the largest group. Notably, the county also had a large cohort of 5-14 year olds in both years.

Arts, Recreation, and Cultural Life

Arts, recreation and cultural activities are measured by four indicators:
- Grants Expenditures;
- Library Holdings;
- Library Funding; and
- Arts Graduates.

Of these, only the first three have county-level data available. Per capita grant expenditures by arts and cultural organizations almost tripled from 2005 to 2007. Government funding for libraries per capita decreased 4% from 2004 to 2007. Public library print holdings per capita remained unchanged at 1.7 from 2002 to 2006.
Economy

The local economy is measured by six indicators:
- Labor Force (Unemployment Rate);
- Industry Employment (Jobs);
- Business Establishments;
- Average Annual Wage;
- Per Capita Income; and
- Median Household Income.

The county’s annual average unemployment rate more than doubled from 2000 to 2003, and then dropped over 40% from 2003 to 2007. Total industry employment remained relatively steady from 2000 to 2003, then increased each year from 2004 to 2007. The number of business establishments increased steadily over the same time period. Average annual wage increased 21% from 2000 to 2007. Per capita income increased every year from 1990 to 2006, except 2001 and 2002. The median household income increased 12% from 2000 to 2007, rising every year except 2001.
Indicator Trend Data
Cabarrus County Profile 2009

although Kannapolis saw almost no change between the 2001-02 and 2002-03 school years, and Cabarrus County district experienced much larger percent changes in 2005-06 and 2006-07 than previously. The percentage of college graduates increased steadily from 1990 to 2007. Average SAT scores remained steady for Cabarrus County; meanwhile, Kannapolis City scores generally increased, with the exception of 2002-03 and 2005-06 when scores decreased. The high school cohort graduation rate for Kannapolis City increased each of the past three years, but remained below that of the County district. The percentage of high school graduates pursuing higher education remained relatively stable for Cabarrus County while Kannapolis City showed a decline from 2000-01 to 2002-03 but regained that lost ground by 2005-06. Public school expenditures per pupil increased for both Cabarrus County and Kannapolis City from 2000-01 to 2006-06. The 5-year average annual per pupil capital expenditures for the County district increased 42% from the period ending in 2004-05 to the period ending in 2005-06, while Kannapolis City’s 5-year average remained constant and well below its County counterpart.

Education

Education is measured by seven indicators:

- Public Schools Enrollment;
- Educational Attainment;
- SAT Scores (Math and Verbal);
- Graduation Rate;
- College Plans;
- Expenditures Per Pupil; and
- Capital Expenditures.

Enrollment for the Cabarrus County and Kannapolis City school districts increased every year from 1999-00 to 2006-07,

Environment

The environment is measured by six indicators:
- Air Quality Index (“AQI”);
- Vehicular Emissions;
- Water Consumption;
- Impaired Streams;
- Solid Waste Disposal; and
- Developed Acreage.

Of these, county-level data are available for all but AQI Days and Impaired Streams, which are available only at larger regional scales. While multi-year trend data for per capita on-road vehicular nitrogen oxides (NOx) emissions are not available, the Cabarrus County rate (87.5) is above the regional average (82.8). Per capital average daily water consumption rose over 70% from 1992 to 1997, and then decreased somewhat from 1997 to 2002. The per capita average annual amount of solid waste sent to landfills increased 59% from 2004 to 2006, then decreased 20% in 2007. The number of developed acres per person increased each decade from 1976 to 2006 and is projected to increase slowly through 2030.
Government and Citizen Participation

Indicators of government and citizen participation focus on five measures of voter turnout and charitable giving:

- Voter Turnout;
- Public Charities;
- Private Foundations;
- Giving to Public Charities; and
- Giving to Private Foundations.

Voter turnout was higher in the 2008 presidential election when compared to the 2004 and 2000 presidential elections, but the 2006 mid-term election turnout was significantly lower than in 2002. The ratio of all registered public charities to population remained steady from 2004 to 2007, while the corresponding ratio for larger public charities (those using IRS Form 990 to report income greater than $25,000) decreased. The ratio to population for larger private foundations fluctuated by 17% around its starting and ending value during that same period. Per capita giving to public charities declined slowly from 2001 to 2005, rose 27% in 2006, and then declined 15% in 2007. Per capita giving to private foundations fluctuated substantially from 2001 through 2006.

Contributions, Gifts, and Grants per Capita for Public Charities

Source: National Center for Charitable Statistics
Health

Health is measured by five indicators:
- Birth Rate;
- Infant Mortality;
- Mortality Rate;
- Suicide Rate; and
- Sexually-Transmitted Diseases Rate.

The birth rate remained steady from 2002 to 2004, and then increased from 2004 to 2007. Infant mortality generally decreased from 2003 to 2007; this was especially true for minority infant rates, although they remained higher than white infant mortality rates. Total mortality rates decreased from 2003 to 2007, as did heart disease mortality rates; cancer mortality rates remained relatively constant. While the suicide rate reached a low of 6.9 per 100,000 in 2004, it doubled in 2005 and then only declined to 11.6 per 100,000 over the next two years. The incidence rates for the sexually-transmitted diseases, chlamydia and gonorrhea, both increased by more than two-thirds from 2002 to 2007.
Housing

Housing is measured by six indicators:

- Housing Units;
- Housing Types;
- Home Ownership;
- Residential Construction;
- Sales; and
- Rental and Vacancy Rates.

The ratio of housing units to population increased slightly between 2000 and 2007. Between 1990 and 2000, single-family detached housing continued to dominate the market, followed by mobile home or trailer housing and multi-family housing. Owner occupied housing decreased slightly between 1990 and 2007. As measured by housing units permitted per 1,000 persons, residential construction remained in the 13-15 range from 2000 to 2004, rose to over 17 in 2005 and 2006, and then dropped back to 13.2 in 2007. Construction cost per unit increased steadily from 2000 to 2007, as did the average residential sales price from 2005 to 2007. The average apartment rental rate climbed 10% between 2000 and 2008, although prices did drop slightly 2003-2005. The average vacancy rate more than doubled from 2000 to 2003, but then fell back to 2000 levels by 2007.

**Public Safety**

Public Safety is measured by six indicators:
- 911 Calls;
- Crime Index;
- Vehicle Accidents;
- Workplace Fatalities;
- Public Safety Education; and
- Evacuation Plans and Disaster Preparedness.

Of these, county-level data are available for all except Public Safety Education. Per capita calls for emergency service did not change appreciably between 2005 and 2006 but decreased in 2007. The crime rate generally increased from 2000 to 2007, with the exception of a slight decline from 2002 to 2003. Between 2001 and 2007, while the number of people in all motor vehicle accidents in Cabarrus County increased, the severity of accidents decreased. Investigated workplace fatalities varied between zero and 2 from 2002 to 2008. As of January, 2009, Cabarrus County had in place eight of the nine reported evacuation planning and disaster preparedness measures, with one measure limited or partially in place.
**Social Well-being**

Social Well-being indicators include these five measures:
- Poverty Rate;
- Child Poverty Rate;
- Child Abuse;
- Teenage Birth Rate; and
- Elderly Assistance Rate.

Poverty rates increased from 2000 to 2007 for both individuals and families (up 76% and 96%, respectively.) The percentage of children in poverty increased 34% between 2000 and 2007. The percentage
of substantiated reports of child abuse increased slightly from 2004-05 to 2005-06. The teen birth rate declined almost 18% between 2001 and 2007, although the rates in 2006 and 2007 were slightly higher than the low of 3.1% reached in 2004 and 2005. Cabarrus County’s percentage of elderly needing assistance with daily activities decreased 15% from 2000 to 2006, and then returned to 2000 levels in 2007.

Transportation

Transportation is measured by four indicators:

- Commuting Alone;
- Average Travel Delay;
- Commute Time; and
- Airport Travelers.

Of these, only two are represented at the county level: Commuting Alone, and Commute Time. Cabarrus County’s percentage of workers driving to work alone increased 3% from 1990 to 2000, and then remained relatively steady through 2007. The percentage of workers commuting more than 25 minutes increased almost 22% from 1990 to 2000, but then remained relatively unchanged through 2007.

Source: US Census: Decennial, American Community Survey
A complete definition is given below for each indicator, identifying the specific quantitative measurement the indicator represents. Definitions are listed by theme area, with the indicator’s “short name” shown first, followed by the “long name” and/or explanation of how the indicator is calculated.

**Demographics**

Annual Population Estimates: Measures the annual estimate of population.

Decennial Population and Projections: The measurement of past population and future population projections on a decennial basis.

Percent Population Growth: This indicator measures the annual percentage growth of the population from the previous year.

Race and Ethnicity: This indicator measures the composition of both race and ethnicity for the population.

Age Distribution: Age Distribution looks at the range of ages for the population.

**Arts, Recreation, and Cultural Life**

Grants Expenditures: Dollars per capita in state and federal appropriations awarded to arts and cultural organizations through the North Carolina Arts Commission and the South Carolina Arts Commission.

Library Holdings: Per capita number of public library print holdings and print serial subscriptions (excluding electronic documents.)

Library Funding: Per capita government funding for public libraries (excluding libraries at state universities or colleges.)

Arts Graduates: Annual number of undergraduate and graduate degree completions in the arts, music and theater from all institutions of higher education in the region, including private and public universities, technical and community colleges and other colleges.

**Economy**

Labor Force: The civilian workforce is the number of workers employed or looking for work, including members of the military. The labor force unemployment rate is the ratio of the number of unemployed to the total civilian workforce.

Industry Employment: Total Employment, All Industries is the total number of jobs across all industry classifications. Employment by Industry is the number of jobs in each industry sector by the North American Industry Classification System’s standard two-digit sector codes.

Business Establishments: Business Establishments, All Industries, is the total number of physical locations of businesses in all industry classifications; note that a business may have more than one physical location, each of which counts as a “business establishment.” Business Establishments by Industry is the number of business establishments in each industry sector by the North American Industry Classification System’s standard two-digit sector codes.

Average Annual Wage: Average Annual Wage, All Industries is the annual total wages across all jobs, divided by total number of jobs in all industry classifications. Average Annual Wage by Industry is the annual total wages in jobs in a given industry sector (defined by the North American Industry Classification System’s standard two-digit sector codes) divided by the total number of jobs in that same industry sector.

Per Capita Income: Total personal income divided by total population.

Median Household Income: Median Household Income is the income of the particular household for which there are an equal number of households with more income and of households with less income.

**Education**

Public School Enrollment: Public School Enrollment is the percentage change in public school enrollment from the previous school year, by school district and for the region. The enrollment data includes students from pre-kindergarten through grade 12.

Education Attainment: This indicator measures the percentage of the working-age population (age 25 and older) with a bachelor’s degree or higher.
SAT Scores: Examines the average Scholastic Aptitude Test (SAT) score as a percentage of the U.S. average score, for each of the region’s 21 school districts and for the region as a whole. Average scores are published both for individual high schools and for school districts, based on scores of all students taking the SAT in a given year. Students taking the SAT are mostly juniors in high school, but can include some sophomores and seniors as well.

Graduation Rate: The figures are the four-year cohort graduation rate, which reflects the number of graduating seniors in a given year as a percentage of the number of enrolled ninth graders from three years prior – in effect, it is the percent of ninth graders who graduate four years later.

College Plans: This indicator tracks the higher-education plans of high school seniors for the year after they graduate from public high schools. Percentages are calculated for students planning on attending two-year, four-year or community colleges, and for those with no plans for higher education (this may include military service).

Expenditures Per Pupil: This indicator measures expenditures per pupil in public schools, excluding capital expenditures. A regional figure was estimated for each school year by multiplying expenditures per pupil by enrollment figures for each school district. The sum of total expenditures across all districts was divided by the total regional enrollment to estimate the regional expenditure per pupil.

Capital Expenditures: Public school capital expenditures per pupil are measured both for school districts and the region. A five-year average is calculated because capital spending by school districts fluctuates significantly from year to year. Total capital expenditures were divided by total enrollment to produce an annual per pupil capital expenditure for each school year. Those annual figures were then averaged to produce an average per pupil capital expenditure in public education for the five-year period.

Environment

Air Quality Index: The percentage of Air Quality Index (AQI) days per year in the “Unhealthy” ranges for the Charlotte-Gastonia-Rock Hill Metropolitan Statistical Area (MSA). The EPA calculates a daily AQI based on the measurement of five major air pollutants regulated by the Clean Air Act, as recorded at approximately 4,000 monitoring stations across the country. The five pollutants are: ground-level ozone, particle pollution (also known as particulate matter), carbon monoxide, sulfur dioxide and nitrogen oxides (NOx). A daily index value is calculated for each air pollutant measured. The highest of those index values is the AQI value, and the pollutant responsible for the highest index value is the “Main Pollutant.”

Vehicle Emissions: This indicator measures on-road vehicular emissions of nitrogen oxides (NOx) in the 14-county region. States are required by the EPA to collect and report emissions data every three years.

Water Consumption: The indicator examines local water system use in average gallons per day per person served by the water systems. This indicator includes only the use of water by local water systems filing reports with the states, and excludes water used for agriculture or power generation, water drawn from individual wells and permitted water intakes by residential or industrial water consumers. These local water systems include municipal, county, and private water systems.

Impaired Streams: This indicator measures looks at impaired stream miles as a percentage of total stream miles in the 11 North Carolina counties in the Charlotte region. It also examines monitoring sites reporting impaired streams in the three South Carolina counties in the region.

Solid Waste Disposal: The Solid Waste Disposal indicator quantifies the disposal of municipal solid waste (MSW) and construction and demolition (C&D) debris. Both states adjust their county-level data to exclude waste “imported” from other places and to include waste “exported” to other places,
Data Definitions
Cabarrus County Profile 2009

providing a measure of waste generated from within each county that is disposed at landfills, regardless of where the disposal occurs.

Developed Acreage: This indicator measures developed land in acres per person. Developed acres include both residential and nonresidential development, excluding agriculture, and are assessed using satellite imagery, taken at roughly 10-year intervals from 1976 to 2006.

Government and Citizen Participation

Private Foundations: Private Foundations are registered 501(c)(3) private foundations that have filed Internal Revenue Service (IRS) Form 990. Foundations designated as 501(c)(3) organizations under the Internal Revenue Code are exempt from federal income taxes because they are operated solely for religious, charitable, scientific, public-safety (testing), literary or educational purposes; amateur sports competition or for the prevention of cruelty to children or animals.

Public Charities: Public Charities are registered 501(c)(3) public charities in the region, including those that have filed an Internal Revenue Service (IRS) Form 990. Public charities designated as 501(c)(3) organizations under the Internal Revenue Code are exempt from federal income taxes because they are operated solely for religious, charitable, scientific, public safety (testing), literary or educational purposes; amateur sports competition or for the prevention of cruelty to children or animals.

Giving (Public Charities): This indicator measures the amount of contributions, gifts, and grants given to 501(c)(3) public charities located in the region and filing Internal Revenue Service (IRS) Form 990.

Giving (Private Foundations): This indicator measures the amount of contributions, gifts and grants received by 501(c)(3) private foundations located in the region and filing Internal Revenue Service (IRS) Form 990.

Voter Turnout: This indicator represents the percentage of registered voters who voted in election years 2000, 2002, 2004 and 2006.

Health

Mortality Rate: Mortality Rates are calculated as the number of deaths per 100,000 population. Mortality Rates for heart disease and cancer were also calculated.

STD Rate: These indicators report sexually transmitted disease rates for Gonorrhea and Chlamydia as the number of cases per 100,000 persons.

Infant Mortality Rate: Infant Mortality Rates reflect deaths of infants aged one year or younger per 1,000 live births. The data also compare infant mortality rates for minorities and whites.

Birth Rate: Birth Rate measures the number of live births reported per 1,000 persons.

Suicide Rate: Suicide Rate is reported as deaths by suicide per 100,000 persons.

Housing

Housing Units: The indicator represents the number of housing units per capita and includes all types of residential development, encompassing single-family homes, apartments, condos, townhomes and all other housing types.

Housing Types: Housing Types include single-family detached, single-family attached (row houses or townhomes), multi-family units, mobile homes and all other housing (such as boats, RVs and vans).

Home Ownership: Home Ownership measures owner-occupied and renter-occupied housing as a percentage of occupied housing units.

Residential Construction: This indicator measures the number of housing units for which building permits were issued. The indicator is expressed as housing units per 1,000 persons.
Data Definitions
Cabarrus County Profile 2009

Sales: This indicator measures the rate of residential real estate closings (the number of closings per 1,000 persons) and the average price of such home sales for single-family homes, condominiums and townhomes.

Rent and Vacancy Rates: The apartment vacancy rate is the percent of all apartments that are vacant as of the date of the survey call on that certain day. The rental rate is the average rent in dollars per month.

Public Safety
911 Calls: This indicator measures the annual per capita calls for 911 Emergency Service.

Crime Index: This indicator measures the number of crimes per 10,000 persons. It is the sum of the crime rates per 10,000 persons for seven categories of crimes: murders, rapes, robberies, aggravated assaults, burglaries, larcenies and motor-vehicle thefts.

Vehicle Accidents: People in Motor Vehicle Accidents measures the total number of people in motor-vehicle accidents and whether the accidents involved a fatality, non-fatal injuries, or property damage only.

Workplace Fatalities: This indicator examines the number of workplace fatalities in the region that have been investigated or are under investigation.

Public Safety Education: Public Safety Education looks at the number of colleges and universities in the 14-county region with a two- or four-year degree in criminal justice, fire safety or emergency-medical training.

Evacuation Planning: Evacuation Planning addressed evacuation plans and disaster preparedness through a survey designed by the UNC Charlotte Urban Institute. Survey questions concerned reverse 911 systems, radio interoperability, disaster training, disaster response and evacuation plans, mutual-assistance agreements, and related topics.

Social Well-being
Poverty Rate: This indicator measures the percentage of families and individuals in the region living in poverty. “Living in poverty” is defined by federally-determined income thresholds verifying what is needed to feed, clothe and economically sustain an individual or families of specified sizes (for example, “a family of four”). Any family or individual whose income does not reach the threshold amount is considered to be in poverty.

Child Poverty: Child Poverty measures the percentage of children under the age of 18, living at or below the poverty level. “Living in poverty” is defined using federally-defined poverty thresholds.

Child Abuse: Child Abuse measures substantiated reports of child abuse or neglect per county for the fiscal year. It represents only the percentage of abuse and/or neglect reports made to each county’s child protective services that are substantiated by those agencies, based on investigative findings.

Teenage Birth Rate: Teenage Birth Rate measures the number of births to mothers under the age of 18 as a percent of all births.

Elderly Assistance Rate: This indicator measures the percentage of individuals age 65 or older who require assistance in performing Activities of Daily Living (ADL). Activities of Daily Living include eating, dressing, bathing, personal hygiene-related tasks, transfers (the ability to get in and out of a bed or chair), ambulation and communication.

Transportation
Commuting Alone: This indicator measures the percent of workers 16 or older who drive to work alone by car, truck or van.

Average Travel Delay: This section focuses on travel delays during peak travel times – considered to be from 6 a.m. to 9 a.m. and from 4 p.m. to 7 p.m. The figures are calculated by dividing the number of extra travel hours by the number of peak period travelers in an urban area. The average
annual travel delay per peak traveler is the yearly
sum of delays per peak trip, divided by the number
of travelers who started a trip during the peak
period.

Commute Length: Commute Length measures the
percentage of workers 16 or older not working at
home who commute more than 25 minutes.

Airport Travelers: This indicator measures the
number of passengers boarding planes
(“enplanements”) and disembarking from planes
(“deplanements”) at Charlotte/Douglas
International Airport. Passengers making
connecting flights at Charlotte/Douglas are
included in these figures.
Data Sources for each indicator are listed below. Data for the 2009 County Profiles were compiled using these sources from November, 2008 through January, 2009.

Commute Length: US Census: Decennial, American Community Survey

Airport Travelers: Charlotte/Douglas Aviation Activity Reports
1Indicator data at the regional level was calculated whenever possible as a weighted average of the source data for all 14 counties. However, in the following instances, the regional figure is calculated differently:

Library Funding Per Capita: Region Number represents the 11 North Carolina counties

Library Print Holdings Per Capita: Region Number represents 13 of 14 counties excluding Anson

Median Household Income: Region Number represents North Carolina state average

Percent Population with Bachelors Degree or Higher: Region Number represents 11 of 14 counties excluding Anson, Chester and Stanly

High School Cohort Graduation Rate: Region Number represents the 11 North Carolina counties

Average Daily Water Consumption, Gallons Per Capita: Region Number represents the 11 North Carolina counties

Solid Waste Disposal, Pounds Per Capita: Region Number represents the 11 North Carolina counties

Percent Voter Turnout of Registered Voters: Region Number represents the 11 North Carolina counties

Birth Rate Per 1,000: Region Number represents the 11 North Carolina counties

Total Infant Mortality Per 1,000 Live Births: Region Number represents the 11 North Carolina counties

White Infant Mortality Per 1,000 Live Births: Region Number represents the 11 North Carolina counties

Minority Infant Mortality Per 1,000 Live Births: Region Number represents the 11 North Carolina counties

Total Mortality Rate Per 100,000: Region Number represents the 11 North Carolina counties

Heart Disease Mortality Rate Per 100,000: Region Number represents the 11 North Carolina counties

Cancer Mortality Rate Per 100,000: Region Number represents the 11 North Carolina counties

Suicide Rate Per 100,000: Region Number represents the 11 North Carolina counties

Chlamydia Rate Per 100,000: Region Number represents the 11 North Carolina counties

Gonorrhea Rate Per 100,000: Region Number represents the 11 North Carolina counties

Percent Owner Occupied Housing: Region Number represents 11 of 14 counties excluding Anson, Chester and Stanly

Percent Renter Occupied Housing: Region Number represents 11 of 14 counties excluding Anson, Chester and Stanly

Average Residential Sales Price: Region Number represents 7 of 14 counties excluding Anson, Catawba, Chester, Cleveland, Lancaster, Rowan and York

Average Apartment Vacancy Rate: Region Number represents 6 of 14 counties excluding Anson, Catawba, Chester, Cleveland, Lancaster, Lincoln, Rowan and Stanly

Average Apartment Rental Rate: Region Number represents 6 of 14 counties excluding Anson, Catawba, Chester, Cleveland, Lancaster, Lincoln, Rowan and Stanly

Calls for Emergency Service (911) Per Capita: Region Number represents 11 of 14 counties excluding Chester, Mecklenburg and York

Crime Index Per 10,000: Region Number represents the 11 North Carolina counties

People in Motor Vehicle Accidents, Total: Region Number represents the 11 North Carolina counties

People in Motor Vehicle Accidents, Property Damage Only: Region Number represents the 11 North Carolina counties

People in Motor Vehicle Accidents, Fatality: Region Number represents the 11 North Carolina counties
People in Motor Vehicle Accidents, Non-fatal Injury: Region Number represents the 11 North Carolina counties.

Investigated Workplace Fatalities: Region Number represents the 11 North Carolina counties.
